## Bucket chain conveyor (+ buckets)

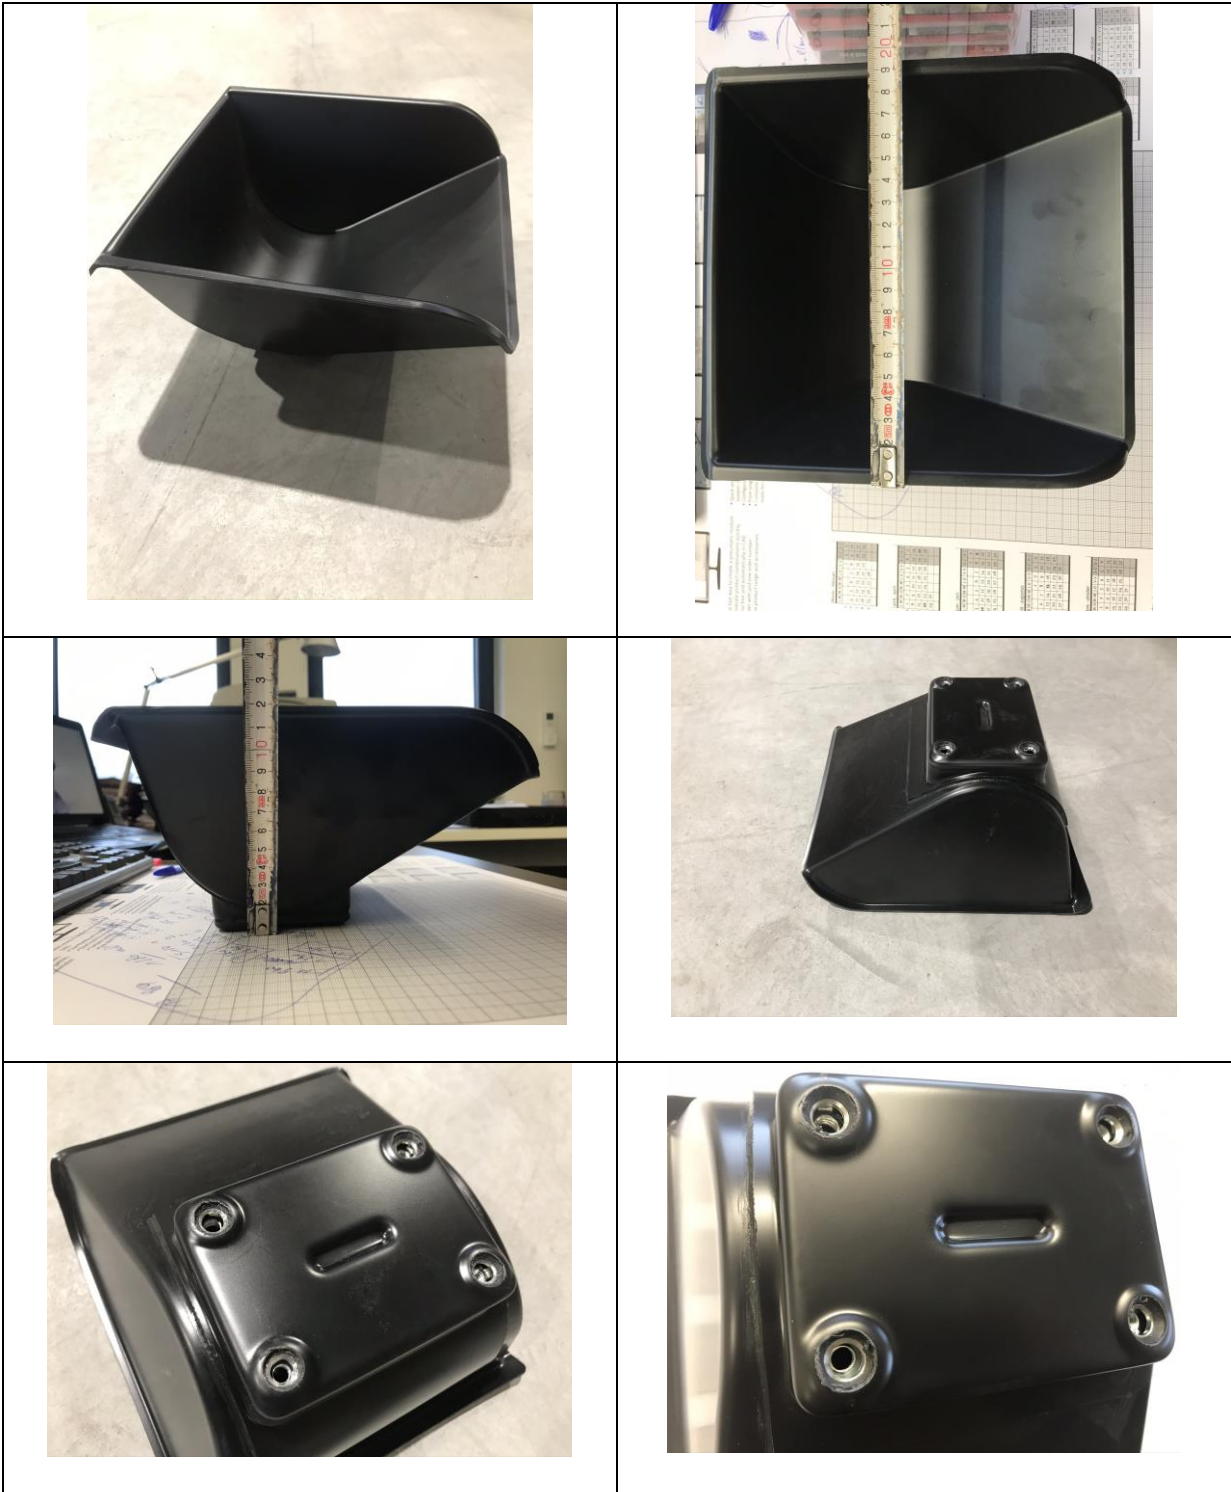

For transport of small portions of tobacco to a pouch packing machine

The bucket conveyor is typically combined with 2 or 3 weighers (6052 weigher type) :

- If combined with 2 weighers (type 6052), a typical speed of 110+ portions/minute is reached. If for some reason a weigher fails, the speed of the line drops to 50%.
- If combined with 3 weighers (type 6052) and CCS (Central control system), the work load is equally divided over the 3 weighers. If for some reason one of the weighers fails, the other weighers will speed up, as a consequence the total output of the line is not affected.

Vaskon also supplies individual buckets :
