Case erector for tobacco container (C30 / C48 / C90 / C96)

This case erector automatically forms virgin and re-used telescopic and non-telescopic boxes C48 (or other box types – C30 / C90 / C96 upon request). A stack (pallet) with folded boxes is entered in the machine, the machine opens (unfolds) the box, and places the formed box on a conveyor. From there on the box continues its way in the factory.

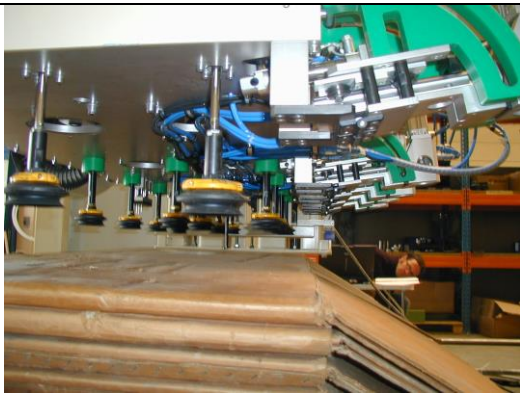

Stack of plano C48 cases

C48 Case (completely formed) leaving the machine

The manipulator takes up the top C48 case from the stack

The manipulator takes up the top C48 case from the stack

Performance : 2 cases/minute

For C48 container. Other container types (C30 / C90 / C96) upon request

References : ITC (India)

A number of options offer a complete solution to pack bulk tobacco into lined containers :

1. Bag inserter : this is a perfect solution to make plastic bags (from reel), and insert the plastic bag perfectly into the container
2. Weigh filler : this unit assures accurate filling into the boxes. Vacuum compacting technology allows to achieve a compacting ratio up to 1.8. Multiple filling stations can combine high capacity with high accuracy
3. Vacuum compactor : to compact the tobacco, preserving product quality.
4. Bag closer : the bag closer perfectly protects your product. Bag sealing with vacuumizing options, or bag folding.
5. Case closer : automatically closes the flaps, and places straps around the box.
